

Student Photograph File Information

Photographs are not mandatory in the eMeal Point of Sale program. It is an option that allows you to associate a picture to a patrons meal account. When a patron meal account is accessed on the serving line POS terminal the patron meal account picture is displayed for positive identification.

What you will need:

Photo files must be in a JPEG format and it is highly recommended they are saved using the patrons meal account identification number as the file name. This will allow for a seamless association for the patron meal account photograph and the patrons meal account.

For the software best performance, it is recommended that each photo file be saved as a file of less than 10K in size.

If you experience difficulties sizing the patron pictures to the required 10K size, contact our technical support department at 1.866.334.8257 (toll free) for a free photo-resizing program.

Photo Conversion Service:

In the event that you cannot furnish the photo files the meet the specifications, MiChoice Technologies can convert the district supplied photo file into the required format and size at a fee of \$90.00 per hour. A price quote for a file conversion can be provided once the patron photo database has been submitted to technical support department for evaluation.
